3.9.1.37	Utilities Proposed - UTPRRD.rul .....	3-217

# **Chapter 3 - RESOURCE AND SUPPORT FILES**

## CADD Production Criteria Handbook

### **3.1 GENERAL**

FDOT has developed CADD Standards for the CADD production of Florida transportation systems to be delivered in the FDOT CADD Software suite. These FDOT CADD Standards are conveyed through customization within the FDOT approved design software and automated tools. The FDOT Menu, included in the FDOT CADD Software delivery, is a doorway into this customization. To define the FDOT CADD Standards and customization, FDOT also delivers CADD Resource and Support Files with the FDOT CADD Software suite. This chapter documents and defines those FDOT Resource and Support Files, which are stored in the FDOT2010 / RESOURCES directory.

### **3.2 CELL LIBRARIES**

In MicroStation, a cell is a small 2D drawing, or a 3D object— usually of a frequently-used or complex symbol, notation, detail, or part. Cells are stored as models in a DGN file called a Cell Library, which can contain many cells (models). Cell Libraries are exactly like DGN files, but with a .cel extension. Any DGN file can be attached as a cell library and any cell library can be opened as a DGN file.

FDOT has designed cells of various drawings that are frequently used in the CADD production of Florida transportation systems. These cells have been grouped by disciplinary usage into the standard FDOT Cell Libraries delivered with the FDOT CADD Software. Updates and changes to the FDOT Cells are included in the FDOT CADD Maintenance Releases (MRs) and hot fixes.

The FDOT Menu provides the user with options to utilize the FDOT Cell Libraries and uses the MicroStation configuration variable, MS\_CELLLIST, to point to the appropriate directory for the listing of FDOT Cell Libraries.

Standard FDOT Cell Libraries are listed in the following table:

CELL LIBRARY	DESCRIPTION
3D.cel	3-Dimensional
alphabet.cel	Alphabet & Number
arrows.cel	Distance & GuidSIGN Arrows
drplan.cel	Drainage Proposed
drplan_ex.cel	Drainage Existing
ftpsigns.cel	Florida Traffic Plans Signs
geotech.cel	Geotechnical
its.cel	Intelligent Transportation Systems Signs
Landscape.cel	Landscape

CELL LIBRARY	DESCRIPTION
Lighting.cel	Lighting
Mutcd.cel	Manual on Uniform Traffic Control Devices
PavementMarkings.cel	Pavement Markings
Roadway.cel	Roadway
row.cel	Right of Way
Signalization.cel	Signalization
SignalPoles.cel	Signal Poles
survey.cel	Survey Symbols for Right of Way
syeng.cel	Survey Symbols for Roadway
TollPlaza.cel	Toll Plaza Signs
tplabels.cel	Traffic Plans Labels
TrafficControl.cel	Traffic Control
ttf_V8DesignStandards.cel	Structures Standards
ttf_v8semi-standards.cel	Structures Semi-standards
ttf_v8structures.cel	Structures
TypicalSection.cel	Typical Sections
utilities.cel	Utilities
v8structurespatterns.cel	Patterns for Structures
XMSuperSection.cel	Structures for Supersections
xsections.cel	Cross Sections

### 3.3 CONTROL FILES

FDOT delivers the Create/Edit program as part of the FDOT software suite. Control Files have been created to control the parameters needed by the Create/Edit program for the creation of any new standard FDOT design file name in adherence with the FDOT naming convention set forth in Chapter 4 of this document. When creating new standard FDOT File Names, the correct control file must be used.

Standard FDOT Control Files:

- GEOTECH.CTL Standard FDOT Geotechnical File Names
- ROADWAY.CTL Standard FDOT Roadway File Names
- RW.CTL Standard FDOT Right of Way File Names
- STRUCTURES.CTL Standard FDOT Structures File Names
- MECHELEC.CTL Standard FDOT Mechanical and Electrical File Names

### 3.4 DATABASE

FDOT has created a GEOPAK Design and Computation Manager (D&C Manager) database file (DDB) in the FDOT2010 folder located at geopak\databases\FDOT2010.ddb. This database has been set up specifically by FDOT to create elements with the correct level symbology according to FDOT CADD Standards.

The Engineering CADD Systems Office is responsible for the development of the FDOT standard GEOPAK Design and Computation Manager databases. The Standard English database is FDOT2010.ddb. The database has been developed to comply with the CADD Standards as defined in the CADD Production Criteria Handbook. This database may need to be modified for project specific items or to comply with District standards. If the database is customized, the user would save the customized database into the project directory in the \symb folder. Saving the database to the project directory is important to ensure the modified database will be delivered with the project.

It also provides a central location for all modified sections that should be merged back into a single database at the end of the project.

When modifying a project specific database, use the following naming convention:

project #

dr	(drainage)
its	(intelligent transportation system)
lnd	(landscape)
lt	(lighting)
rdwy	(roadway)
sg	(signalization)
sp	(signing and pavement markings)
util	(utilities)

### 3.5 PRINTER DRIVER CONFIGURATION FILES

The FDOT CADD Software supplies plot drivers created to generate plots to scale using the sheet cells (also provided with the FDOT CADD Software) when used on specific plotters. All plot drivers have raster plotting enabled. These drivers are called examples due to various site-specific configurations and the types of plotters that may be encountered.

The table below lists the plot driver names and the type of printer / plotter on which it was tested and assured to work. Each printer/plotter has its own footprint or area on the paper on which it can plot. For this reason, if a printer/plotter, not listed below, is used to generate plots, the plot driver in use will require modification to plot to scale.

PLOT DRIVER	PRINTER / PLOTTER	DESCRIPTION
36x24.pro	N/A	Controls postscript image/plot output
Color.plt		Color 11x17 (Raster Capable) Uses FDOT.TBL pen table and pscript.pro prolog file.
Color_FDOTPDF.pltcfg	N/A	Creates a color .pdf file. (Raster Capable) Uses FDOT.TBL pen table.
Color_Keysheet.pltcfg	ANY	To be used when printing key sheets containing maps with filled shapes.
FDOT.tbl	N/A	Pen table enters username, date time, and sheet border path.
FDOT_GrayExisting.tbl	N/A	Pen table enters username, date time, sheet border path, and applies gray scale to files named like TOPO*, UTEX*, and DREX*
FDOTbatchplt.spc	N/A	Batch plot specification file customized for FDOT plot drivers. (Only used with old Batch Print dialog. It is being replaced with Print Styles in MicroStation V8i)
FDOTPDF.plt	N/A	Creates a .pdf file. (Raster Capable) Uses FDOT.TBL pen table.
FDOTprinter.plt	Windows Printer	Copy of Bentley's printer.plt with weights and styles set to FDOT standards. Uses FDOT.TBL pen table.
HP1055.plt	HP 1055 CM	Monochrome 36x24 (Raster Capable) Uses 36x24.pro prolog file.
HP1055C.plt	HP 1055 CM	Color 36x24 (Raster Capable) Uses 36x24.pro prolog file.
HP5000.plt	HP 5000 GN	Monochrome 11x17 (Raster Capable) Uses FDOT.TBL pen table and hptabl1.pro prolog file.
HP5000Legal.plt	HP 5000 GN	Monochrome 8.5x14 (Raster Capable) Uses FDOT.TBL pen table and hptlegal.pro prolog file.

PLOT DRIVER	PRINTER / PLOTTER	DESCRIPTION
HP5000Letter.plt	HP 5000 GN	Monochrome 8.5x11 (Raster Capable) Uses FDOT.TBL pen table and hptleter.pro prolog file.
hpglrlt.pltcfg	Large Format	Intended for use when printing large format monochrome sheets. (Raster Capable)
hpglrlt_c.pltcfg	Large Format	Intended for use when printing large format color sheets. (Raster Capable)
PostScript.plt	N/A	Creates postscript image file. (Raster Capable) Uses FDOT.TBL pen table and hpttbl1.pro prolog file.
Postscript36x24.plt	N/A	Creates postscript image file. (Raster Capable) Uses FDOT.TBL pen table and 36x24.pro prolog file.
pscript.pro	N/A	Controls postscript image/plot output
XeroxN40.plt	XEROX Docuprint N4025	Monochrome 11x17 (Raster Capable) Uses FDOT.TBL pen table and hpttbl1.pro prolog file.

## 3.6 SEED FILES

MicroStation uses “seed” files to create all graphics design files. FDOT utilized these seed files to create templates in which standard parameters are set according to the drafting needs to begin a specific type of work in accordance with FDOT standards.

The FDOT seed file defines the working units for the graphics file, global origin of the coordinate system, view attributes, default color table, text settings, coordinate readout and several other important parameters. FDOT supplies English seed files for both 2D and 3D.

Working units and global origin are two of the most important settings in the seed file. Working units are expressed as master units and sub-units. FDOT has defined all seed files for MicroStation based on master unit of Survey Feet with a sub unit of Survey Inches. The global origin has been moved to the center of the design plane for all seed files.

The resolution is defined per the master unit and determines the size (working area) of the design plane.

### 3.6.1 ENGLISH 2D SEED FILE (FDOTSEED2D.DGN)

The following settings apply to all 2D seed files.

Working Units:

- Master Units = Survey Feet
- Sub-Units = Survey Inches
- Resolution = 304800 per Survey Foot
- Global Origin: Center of Design plane

### 3.6.2 ENGLISH 3D SEED FILE (FDOTSEED3D.DGN)

The following settings also apply to 3d seed files.

Working Units:

- Master Units = Survey Feet
- Sub-Units = Survey Inches
- Resolution = 304800 per Survey Foot
- Global Origin: Center of Design plane

## 3.7 TEXT

### 3.7.1 FONTS

FDOT delivers a set of True Type Font (ttf) files to ensure uniformity and legibility of FDOT CADD drawings. The FDOT CADD Software delivers a set of proportional and uniformed spaced True Type Font files using vertical and slanted characters, the detail of which is reflected in the table below. Specifying specific fonts with specific levels is not a requirement. Fonts should be determined using the guidelines provided in the table below, however, the level and style used are optional and left entirely up to the designer. The zdotfont.rsc and structuresfont.rsc files are delivered with the FDOT CADD software delivery to maintain legibility of legacy files.

MicroStation can utilize fonts contained within MicroStation RSC, AutoCAD SHX, and True Type Font files. MicroStation will read multiple font resource files according to the paths set by the MS\_FONTPATH configuration variable in the selected workspace and True Types Fonts registered with the Windows operating system. Within a MicroStation design file, font resources are compiled into a list of fonts from all the resource files that are found. The MstnFontConfig.xml file located by the MS\_FONTCONFIGFILE variable determines if duplicate font names are displayed in font selection lists and how to resolve duplicate font names.

#### 3.7.1.1 FDOT True Type Fonts (ttf)

A single True Type Font file may contain thousands of characters. The FDOT ttf files contain special characters used by designers that are not normally found in standard publishing fonts. If the FDOT ttf files are registered with the operating system, the default behavior when installing the FDOT CADD software suite, the fonts may be used in any standard windows program like Word and Excel.

Font	Description
FDOT	Standard slanted proportional spaced font used for most annotations
FDOTBold	Bold version of FDOT font
FDOTImprint	Chiseled font used mainly within FDOT border
FDOTImprintBold	Bold version of FDOTImprint font
FDOTMono	Standard mono-spaced font used mainly in tables to keep characters aligned
FDOTMonoBold	Bold version of FDOTMono font
FDOTVert	Non-slanted proportional spaced version of FDOT font used mainly by ROW discipline
FDOTVertBold	Bold version of FDOTVert font used mainly by ROW
FDOTVertMono	Mono-spaced version for FDOTVert font used mainly in tables used mainly by ROW
FDOTVertMonoBold	Bold version of FDOTVertMono font used mainly by ROW

### 3.7.1.2 MicroStation Fonts

A single font resource file can contain up to 256 fonts. The fonts within zdotfont.rsc are no longer in use, but must be maintained for backward compatibility purposes. The fonts contained within the zdotfont.rsc file are described later.

FDOT Font resource file - Zdotfont.rsc:

Font	Description
0	(Fast font) Simple font - Upper and Lower Case, Fractions
2	Wide font - Upper Case (used by survey & mapping)
3	Narrow font - Upper and Lower Case (used by survey & mapping)
4	Italics font - Upper and Lower Case (used by survey & mapping)
5	Script font - Upper and Lower Case (used by survey & mapping)
6	Simple Block font - Upper Case (used by survey & mapping)
7	Filled font - Upper Case (used by survey & mapping)
8	Filled font - Lower Case (no numbers - used by survey & mapping)
9	Filled font - Upper and Lower Case (used by survey & mapping)
10	Simple font - Upper and Lower Case, Fractions (used by survey & mapping)
11	Slanted font - Upper and Lower Case (used by survey & mapping)
12	Filled font - Upper Case (no numbers - used by survey & mapping)
13	Outline Block font - Upper Case (used by survey & mapping)
14	Script font - Upper and Lower Case (used by survey & mapping)
15	Old English style font - Upper and Lower Case (used by survey & mapping)
16	Upper Case and Engineering Symbols
17	Arrow and Miscellaneous Symbols
23	Slanted Simple font - Upper and Lower Case, Fractions
25	Standard font - Upper and Lower Case, Fractions (English projects prior to 2000 - No longer used)
26	Greek Symbols
41	Hand lettering font - Upper Case
42	Block outline font - Upper Case for Architecture plans
48	Slanted font (proportional spacing) Upper and Lower Case, fractions (the new English font for Design and Traffic Plans for labels)
49	Slanted font (proportional spacing) Upper and Lower Case, fractions (the new English font for Design and Traffic Plans for notes)
58	Vertical font (proportional spacing) Upper and Lower Case, fractions (used by R/W Engineering and Mapping for labels in English projects)
59	Slanted font (proportional spacing) Upper and Lower Case, fractions (used by R/W Engineering and Mapping for labels in Metric projects)
67	Provided for backward compatibility, no longer used.
68	Slanted font (proportional spacing) Upper and Lower Case, fractions (used by Structures for labels)
69	Slanted font (proportional spacing) Upper and Lower Case, fractions (used by Structures for notes)

Font	Description
70	Standard font - Upper and Lower Case, fractions (used in the Roadway and Traffic Design Standards)
71	Slanted font - Upper and Lower Case, fractions
72	Simple font - Upper and Lower Case, fractions
77	Filled font - Upper and Lower Case used for the titles in Sheet borders
78	Slanted font (proportional spacing) Upper and Lower Case (the Metric font for Design and Traffic Plans for labels)
79	Slanted font (proportional spacing) Upper and Lower Case (the Metric font for Design and Traffic Plans for notes)
80	True Type font Arial
81	True Type font Arial Italic
82	True Type font Courier
83	True Type font Courier Italic
84	True Type font Engravers Gothic
85	True Type font Photina
86	True Type font CG Times
87	True Type font Swis721
88	True Type font Times New Roman
89	True Type font Times New Roman Italic
90	True Type font Times New Roman Bold Italic
91	True Type font Garait
92	True Type font Garamond
93	True Type font Garamond Bold
94	True Type Greek Alphabet and Symbol
95	True Type Wingding
96	True Type WPMathA
97	True Type WPMathB
98	Character symbol text from cross section files
99	Block filled fonts - Upper and Lower Case for signs
100	Symbol arrows
101	Symbol fonts for cross section files
102	Topography symbol fonts (used by Surveying and Mapping)
126	Topography symbol fonts (used by Surveying and Mapping)

### 3.7.2 SIZE AND SPACING

FDOT has selected standard text sizes to ensure uniformity and legibility on FDOT CADD drawings. The appropriate text size is dependent on the plot scale selected. Since the most important issue with text is legibility, font, weight and text size may vary as necessary. Text line spacing should be, on average, three-fourths of the text height.

FDOT CADD Software provides several Text Levels and Text Styles for designers to choose as guides or starting points to create text to fit their needs. Text Levels can be identified by the naming convention beginning with "Text".

The following table should be used as a guideline for standard text size definitions for plans at given plot scales.

**English Text for B-Size Plans (11" x 17" paper)**

English (Scale)	1"=1'	1"=20'	1"=40'	1"=50'	1"=100'	1"=200'	1"=400'	1"=500'
<b>Minimum</b>	0.06	1.2	2.4	3	6	12	24	30
<b>Desired</b>	0.07	1.4	2.8	3.5	7	14	28	35
<b>Maximum</b>	0.1	2.0	4	5	10	20	40	50

*Note* For Right of Way Mapping Standard Text Sizes, See Chapter 9.

## 3.8 LEVELS AND SYMBOLOLOGY

FDOT defines CADD level/symbology Standards using Design Libraries, Color Tables, Line Styles Resource files, Line Weights and Toolboxes. FDOT has created standard FDOT DGN Libraries (DGNLibs) within MicroStation to store FDOT Standards for: cells, levels, level filters, line styles, multi-line styles, text styles, dimension styles, element templates, menu customizations, customized tools, tool boxes, and tasks. Each FDOT DGNLib contains data that is shared throughout files and among users.

Each FDOT Standard defined in a Design Library (DGNLib) is identified by a unique name. When used from a DGNLib, it is copied into the active design file and is given the same name. This allows for comparison of the local resource to the FDOT DGNLib resource for compliancy to FDOT CADD Standards.

FDOT DGNLibs allow administrators to create shared resources in one place and distribute them to many users. Having a central location for resources makes the maintenance and management of them easier.

The following is a listing of all standard FDOT DGNLibs:

DGNLib	DESCRIPTION
fdot_common_levels.dgnlib	FDOT Standard Common Levels
fdot_v8_levels.dgnlib	FDOT Standard Roadway Levels
FDOT_PrintStyles.dgnlib	FDOT Standard Print Styles
FDOT_Styles.dgnlib	FDOT Standard Styles
FDOTToolboxes.dgnlib	FDOT Standard Toolboxes
GeoTech.dgnlib	FDOT Standard Geotechnical Levels
photogrammetry.dgnlib	FDOT Standard Photogrammetric Levels
rwlevels.dgnlib	FDOT Standard Right of Way Levels
StrLevels.dgnlib	FDOT Standard Structure Levels
survey_levels.dgnlib	FDOT Standard Survey Levels
V7_levels.dgnlib	FDOT Standard V7 Levels
countymappinglevels.dgnlib	FDOT Standard County Mapping Levels

### 3.8.1 LEVELS

The standard FDOT Level Libraries define the CADD Levels for each Discipline with the associated ByLevel Color, ByLevel Line Style, and ByLevel Line Weight symbology. Designers are to use these standard FDOT Levels to assign each element within FDOT CADD design files.

The FDOT Levels and symbology are grouped and translated into Rule Files utilized for Quality Control to check compliancy of each FDOT design file to the FDOT CADD Standards. Rule Files will be discussed in detail in the section to follow.

The following are FDOT's basic level naming convention rules to assist CADD users in placement of design elements:

- Level Names have 18 maximum characters.
- The format of the Level Name is: *object\_sv*

Where: **object** = element type

**s** = state  
**v** = view

**states**

**p** (*proposed*)  
**d** (*drafting element*)  
**e** (*existing*)

**views**

**x** (*cross section*)  
**r** (*profile*)  
**p** (*plan*) (*DTM is the same as plan*)

**Note** Level Names with no “\_sv” portion in the name are assumed to be: \_pp (*proposed plan*).

Example: With this information one can determine the following about the Level names below:

- |        |   |
|--------|---|
| gas    | - Proposed Plan view elements for “gas” related items |
| gas_ep | - Existing Plan view elements                         |
| gas_px | - Proposed cross section view elements                |

### 3.8.2 COLOR TABLES

The standard FDOT Color Table (FDOTColor.tbl) was created to allow users to visually identify elements with ease in shared files and for consistency in color plotting. The FDOT Color Table is a modified version of the MicroStation default color table (color.tbl) which defines 256 colors. The most important aspect for the standardization of colors is the number that is applied.

FDOT Color Table customizes various MicroStation colors 0 through 166 as defined in the table below. The remaining colors match the MicroStation's default color table. The FDOT Color Table is named “FDOTColor.tbl” as preset by the FDOT workspace variable MS\_DEFCTBL and attached in the FDOT seed files. Some disciplines use the MicroStation default color table or their own customized color table in place of the standard FDOT Color Table. These are defined in the discipline specific chapters.

FDOT Color Table (FDOTColor.tbl):

MicroStation Color	MS RGB Value	MicroStation Color	MS RGB Value
0	255,255,255	18	0,240,0
1	0,0,255	19	240,0,0
2	0,255,0	20	225,225,225
3	255,0,0	21	240,0,240
4	255,255,0	22	240,122,0
5	255,0,255	25	0,0,240
6	255,165,0	27	240,0,0
7	0,255,255	28	240,240,0
8	148,0,211	30	240,122,0
9	140,88,44	55	0,210,210
10	200,176,125	68	195,195,0
11	192,192,192	81	0,0,180
12	255,192,203	130	0,135,0
13	0,100,0	150	120,82,0
14	176,176,176	152	120,120,120
15	0,240,240	154	0,120,0
16	240,240,240	157	120,0,120
17	0,0,240	166	105,77,0

### 3.8.3 LINE STYLES

FDOT Line style (LC=line code) is part of the symbology of graphic elements in MicroStation. It defines a line's appearance as being solid, continuous dashes, dots and dashes, and so on. Each element has its own line style (line code). An element can be set to a standard MicroStation line style (numbered 0 - 7) or to a custom line style as defined in a custom line style resource file or embedded in a design file.

Custom line styles are user defined linear elements that contain patterns, cells, or set intervals of dashes and gaps. Some examples of custom line styles are a tree line, fence line, guardrail, etc. When an element is drawn in MicroStation with a custom line style, the definition of the line style may or may not be contained within the design file, only the line style name and id number may be stored.

If the custom line style is not embedded in the active file, the resource file from which it was selected must accompany the design file and it must be found by MicroStation's configuration in order to properly display the line. Therefore, if it is advantageous to the user to create a non-standard custom line style, the resource file must be delivered in the project directory structure or the line style must be embedded in the appropriate design file. The user should not create a custom line style with the same name as a FDOT Standard Line Style.

User created resource files should be different in name from the FDOT resource files and copied to the **\SYMB** sub-directory of the FDOT project directory structure.

### 3.8.3.1 Standard English Line Style Measurements for Plotting

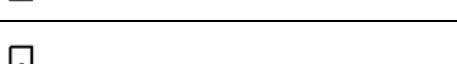

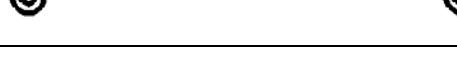

style(1)=(0.02, 0.04)	0	—————
style(2)=(0.08, 0.04)	1	- - - - -

### 3.8.3.2 FDOT Custom Line Style Resource Files

FDOT has provided custom line styles for all linear repeating patterns. As previously mentioned, custom line styles are user definable in MicroStation. All standard FDOT custom line styles that will be carried forward on future releases of the FDOT CADD software have been embedded in the standard seed files.

**Note** Users shall not modify the standard FDOT Custom Line Style resource files.

### 3.8.3.3 Custom Line Style graphics

Discipline	Line Style	Description	Image
Maintenance of Traffic	attenuator	Attenuation Systems	
Maintenance of Traffic	barricade1	Barricade Symbol Type 1 or 2 at 15' spacing	
Maintenance of Traffic	barricade2	Barricade Symbol Type 1 or 2 at 30' Spacing	
Maintenance of Traffic	barricade3	Barricade Symbol Type 1 or 2 at 50' Spacing	
Maintenance of Traffic	barricade4	Barricade Symbol Type 1 or 2 at 100' Spacing	
Maintenance of Traffic	cone1	Cones at 25' Spacing	
Maintenance of Traffic	cone2	Cones at 50' Spacing	
Maintenance of Traffic	drum1	Drums at 15' Spacing	

Discipline	Line Style	Description	Image

### 3.8.4 LINE WEIGHT

Line weight is defined by a numerical index within the range of 0 to 30 that designates the stroke width or thickness of the line used to draw and plot a graphic element. Each element has its own line weight. The first position defines weight 0, second weight 1, and third weight 2 and so on up to weight 30. The standard line thickness (width) of a plotted graphic element is in dots per inch. Some printers may require the adjustment of these weights.

**Note** For Right of Way Mapping Line Weight requirements see Chapter 9.

Printed Outputs from the design files and postscript image files must be legible and of a quality to be reproducible on 2<sup>nd</sup> generation copies. Line Weights as defined in the table are default settings in the Plot drivers, but may need to be adjusted, depending on hardware, to produce the required quality of printed document.

FDOT Line Weights:

Line Weight	Weight (Inches)
0	0.003
1	0.006
2	0.009
3	0.012
4	0.015
5	0.018
6	0.021
7	0.024
8	0.027
9	0.030
10	0.033

Line Weight	Weight (Inches)
11	0.036
12	0.039
13	0.042
14	0.045
15	0.048
16	0.051
17	0.054
18	0.057
19	0.060
20	0.063

Line Weight	Weight (Inches)
21	0.066
22	0.069
23	0.072
24	0.075
25	0.078
26	0.081
27	0.084
28	0.087
29	0.090
30	0.093

## 3.9 STANDARDS RULE FILES

**Symbology Standards** that apply to FDOT Projects are set up under a listing of Standard Level Names with specific ByLevel Color, Style and Weight attributes. These levels are grouped under specific Rule Files which are associated to each valid standard FDOT Filename of each Discipline for the purpose of performing the Quality Control check for FDOT CADD Standard compliancy of each FDOT project design file.

**Note**      *The individual Discipline chapters (Chapters 9-24) provide complete Standard File Name listings with associated Rule Files applicable to each respective Discipline.*

FDOT Standard Rule Files & Descriptions:

Rule Name	Rule Description	Rule Name	Rule Description
algnrd	Alignment Design	mrarsp	Mast Arm Details
autosp	AutoTURN	pdxsrd	Pond Cross Section
cliprd	Clip Border	planrd	Roadway Plan Sheet
ctlsrd	Survey Control Sheet for Right of Way	plprrd	Roadway Plan/Profile Sheet
drdtrd	Drainage Detail	qtdsrd	Quantity Computation
drexrd	Drainage Existing	rdxsrd	Roadway Cross Section
drmprd	Drainage Mapping	rdxssp	Signing & Pavement Cross Section
drprrd	Drainage Proposed	rwdtrd	Right of Way Detail for Roadway
drxsrd	Drainage Cross Section	rweng10	Right of Way

gswksp	GuidSIGN	utadrd	Utilities Adjustment
irrgld	Irrigation	utexrd	Utilities Existing
itssp	Intelligent Transportation System	utprrd	Utilities Proposed
keysht	Key Sheets		

### 3.9.1 STANDARD FDOT LEVELS BY RULE FILE

As stated previously, FDOT has established CADD Standard symbology levels and grouped them into Standard Rule Files used to check compliancy of all FDOT project design files to these CADD Standards. In the tables to follow each Standard Rule Files is documented and the Standard Symbology Levels found within each one are defined.

Critical Levels are identified with an (X) and indicate that all symbology (color, line style, & line weight), as well as level name, will be checked for compliancy when the Quality Control (QC) process is run. All other Non-critical levels will be checked ONLY for level name when compliancy is checked.

**Note** For Right of Way's Rule File (*rweng10.rul*) table, see CPCH Chapter 9. For Structures' Rule File (*spst10.rul*) table, see CPCH Chapter 18.

#### 3.9.1.1 Alignment Design - ALGND.RUL

Critical Level	Rule File	Level No.	Level Name	Level Description	ByLevel Color	ByLevel Style	ByLevel Weight
